

PROGRAM:1

Model a simple HTML file to demonstrate the use of different tags.

```
<html>
<head>
<title>first prgrm</title>
</head>
<body bgcolor="pink">
<h1><b><u>webpage</b></u></h1>

<p><i><font color="red">Hypertext Markup Language is the standard markup language for
documents designed to be displayed in a web browser.
```

HTML provides a means to create structured documents by denoting structural semantics for text such as headings, paragraphs, lists etc.

Web browsers receive HTML documents from a web server or from local storage and render the documents into multimedia web pages.

HTML describes the structure of a web page semantically and originally included cues for the appearance of the document.

HTML elements are the building blocks of HTML pages.

With HTML constructs, images and other objects such as interactive forms may be embedded into the rendered page.

HTML provides a means to create structured documents by denoting structural semantics for text such as headings, paragraphs, lists, links, quotes and other items.

HTML elements are delineated by tags, written using angle brackets.

</i></p>

```
<h2><b><U>Basic html tages</U></b></h2>
```

```
<ul>
```

```
<li>title</li>
```

```
<li>head</li>
```

```
<li>body</li>
```

paragraph tag

</html>
